Hubject Partnership

Enhanced Roaming and Charging Capabilities on the Blink Network

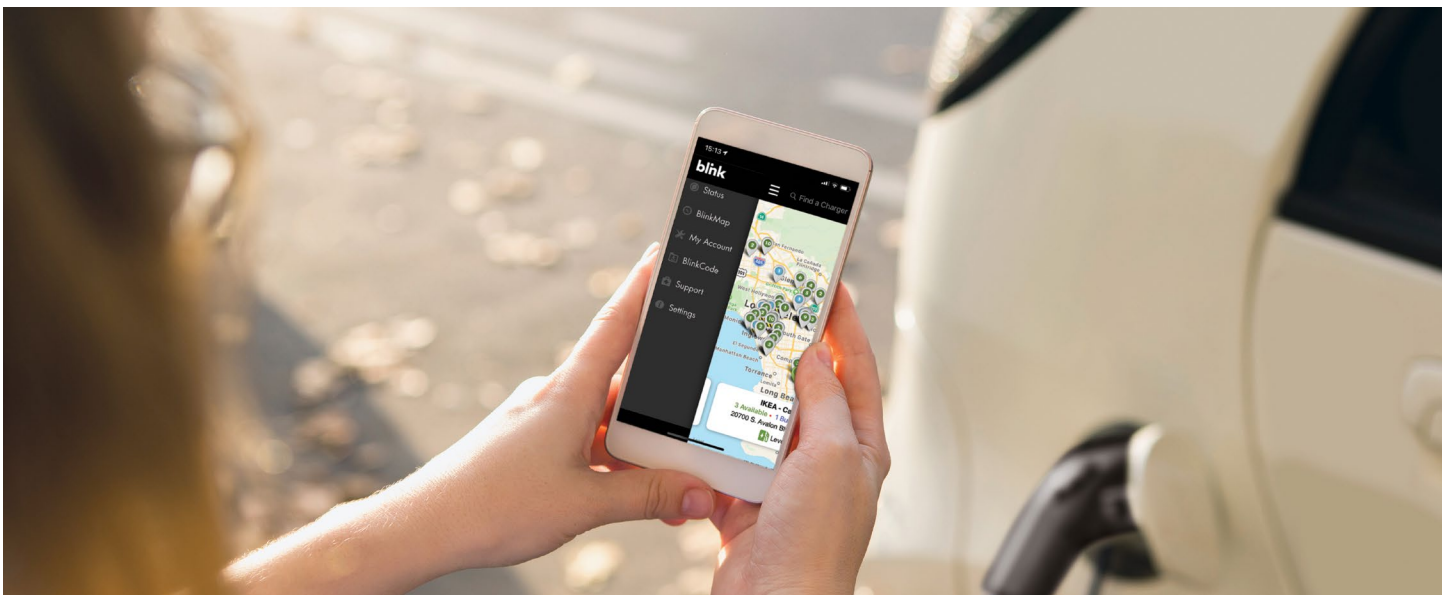

Blink members will be able to quickly and easily access charging stations on Hubject participating networks while driving in the U.S.

EMOBILITY • BLINK NETWORK • EV ROAMING

The Hubject platform is the biggest international digital B2B marketplace related to the charging of electric vehicles with more than 300 service partners. The platform connects more than 90,000 charging stations across three continents in order to create a digital and borderless charging network for electric vehicles – the “intercharge” platform.

Hubject Benefits

- Blink members can easily access charging stations on Hubject participating networks while driving in the U.S., without having to register with any other charging station companies
- Seamless charging interoperability for all EV drivers participating in Hubject’s international multi-network “intercharge” platform
- Although Hubject itself does not operate any charging stations it enables the smooth exchange of data in the background
- As an open and flexible “intercharge” platform, it connects charging station operators and eMobility service providers in a neutral space with only one contract and one API interface
- Hubject’s platform allows EV drivers to easily find, access and pay for charging from any charging operator or network with one account, one app and one bill
